Analysis and Comments	Result	Units	Reporting Limit	Notes
2030B Ethylbenzene, Blood				
Analysis by Headspace Gas Chromatography (GC)				
Ethylbenzene	5.0	mcg/mL	0.10	

Ethylbenzene is used as a commercial solvent, fuel additive and chemical intermediate in the production of styrene. In the U.S. population, blood concentrations in non-occupationally exposed individuals are generally less than 0.001 mcg/mL.

Exposure to this compound generally occurs through the pulmonary route. At air concentrations of 1000 ppm, the compound causes irritation to the eyes and nose. Higher concentrations may result in dizziness and central nervous system depression.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
