0205B Acetyl Fentanyl, Blood

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Acetyl Fentanyl	5.0	ng/mL	0.10	
-----------------	-----	-------	------	--

Acetyl fentanyl is a novel non-prescription synthetic opioid that has been implicated in several deaths. This fentanyl analog was previously undocumented in illicit drug use and is estimated to be five times more potent than heroin. Several state agencies have issued public health warnings. The Centers for Disease Control (CDC) has recommended increased vigilance by public health agencies, emergency departments, state laboratories, medical examiners, and coroners for patients with symptoms consistent with opioid overdose. It is also recommended that if a fentanyl immunoassay (e.g., ELISA) produces a positive result additional confirmation testing be performed and that this testing should include fentanyl and its analogs, including acetyl fentanyl.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
