0205B Acetyl Fentanyl, Blood

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Acetyl Fentanyl None Detected ng/mL 0.10

Acetyl fentanyl is a novel non-prescription
synthetic opioid that has been implicated in
several deaths. This fentanyl analog was previously
undocumented in illicit drug use and is estimated to be
five times more potent than heroin. Several state
agencies have issued public health warnings. The
Centers for Disease Control (CDC) has recommended
increased vigilance by public health agencies,
emergency departments, state laboratories, medical
examiners, and coroners for patients with symptoms
consistent with opioid overdose. It is also recommended
that if a fentanyl immunoassay (e.g., ELISA) produces a
positive result additional confirmation testing be
performed and that this testing should include fentanyl
and its analogs, including acetyl fentanyl.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US
Food and Drug Administration.
