1333SP Copper - Free, Serum/Plasma

Analysis by Inductively Coupled Plasma/Mass Spectrometry (ICP/MS)

Copper	15	mcg/L	11	
--------	----	-------	----	--

NMS Labs derived data:
Median, 1.2 mcg/L; range, Less than 1 - 180 mcg/L (N = 937).
10 - 90% of concentrations range from Less than 1 - 54 mcg/L.

NMS Labs uses a direct measurement technique using ultracentrifugation for free copper determinations. Comparison of reported concentrations to techniques where calculated free copper concentrations are determined is not recommended.

Specimens for elemental testing should be collected in certified metal-free containers. Elevated results for elemental testing may be caused by environmental contamination at the time of specimen collection and should be interpreted accordingly. It is recommended that unexpected elevated results be verified by testing another specimen.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
