2390SP Ibuprofen, Serum/Plasma

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Ibuprofen	50	mcg/mL	3.0	
Synonym(s): Motrin®				

Following a single 400 mg oral dose, the average peak plasma concentration was 28 mcg/mL (range, 17 to 36 mcg/mL) at approximately 1 hour post dose. Severe symptoms such as hypotension and renal failure are possible above 100 mcg/mL and probable above 200 mcg/mL plasma at approximately 1 hour post dose.
This test is not chiral specific and cannot distinguish between the R and S enantiomers of ibuprofen

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
