4783B Voclosporin, Blood

Analysis by High Performance Liquid Chromatography/
Tandem Mass Spectrometry (LC-MS/MS)

Voclosporin	5.0	ng/mL	1.0	
Synonym(s): Lupkynis®				

Voclosporin is a calcineurin inhibitor approved for the treatment of adults with lupus nephritis. Published Phase 3 clinical trial data indicated voclosporin in combination with mycophenolate mofetil (MMF) and low-dose steroids led to a clinically and statistically superior complete renal response rate versus MMF and low-dose steroids alone, with a comparable safety profile. Peak whole blood concentrations are reported to average 32 +/- 9.9 ng/mL and 950 +/- 250 ng/mL approximately 1-2 hours following single oral doses of voclosporin at 0.25 mg/kg and 4.5 mg/kg, respectively.

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the US Food and Drug Administration.
